**Q. Can you still get parts for the Venturi mixer?**

Yes, parts are still available for the Venturi mixer, which was sold from 2002 to 2010. Two configurations were available – with the outlet concealed or exposed, but unfortunately both had a tendency to seize. O-ring grease helps to lubricate the o-rings on the rotor. Due to the closing action of the rotor over time, the o-ring lube will remove itself from the o-ring causing the rotor to become stiff and possibly seize.

**Note:** There are two levers in the pack. The small lever is to fit on the 2006 handle and the large lever to fit on to later handles.

**2. REPLACE ROTOR AND CAM SET, INCLUDING THE SEALS**

When servicing this mixer the rotor and cam set should be replaced including the seals. Liberal amounts of o-ring grease should be applied to the rotor.
